# CIVIL ENGINEER

There's a real buzz with the buzz of the machine.

That's exactly what engineers do, come up with solutions to problems. Whether you're analysing or taking off the numbers, a civil engineer sets the design and the blueprint of the runway to cater for those multi-aircraft types. And it's an engineer who oversees the specialising on your ground that gives the roads, rails, bus, water and power to take off.

Maths was the only subject that stayed with me from school and now it means for working on some of Australia's biggest public works and major projects.
