BE MORE THAN A NUMBER

ROBOTICIST

AS A ROBOTICIST, YOU'LL BE RESPONSIBLE FOR DESIGNING AND BUILDING ROBOTS.

Not if lines were going to take over the world, but rather they could help us humans. My company recently launched its first robot called "RoboPop", a telepresence robot which allows you others you want to go. Imagine designing the student you in hospital could go to with of remote, or if an air liner could end a disaster on the other side of the world.

Maths is crucial to everything we do. From safety or reliability to the overall engineering of a product. Sometimes making a difference makes you realise you're part of the beginning of an even bigger adventure.

Marita Cheng
