THESE SKILLS ARE IN HIGH DEMAND

Order food online or use of the world's virtual farm means there's an equation in growing, but the amount of produce can give crops a run for their money.

At CSIRO, we're gathering huge amounts of data collected from land and water to create a digital agri-landscape.

We use maths to translate this data into useful information, we build algorithms to translate satellite images, and use livestock and population data and useful information to support agriculture decision-making.

Tom Fyfe
