

# NUMBER

My choice of studying mathematics and working in education has enabled me to travel the world and get paid to do it. I have met and worked with many fantastic people, some of whom remain my closest friends.

Mathematics is the common component of humanity's shared culture, a universal language that empowers us to become problem solvers in a world fraught with problems such as climate change, food security and health care. Mathematics can tackle these. Ultimately though, maths is just a really fun thing to do.
