

Maths takes you places...

'Imagine a flight simulator, but with marine ecology instead of a jet plane.

We have developed mathematical simulations – now in use in 26 countries – that allow us to test different management strategies on marine systems before trying them in the real world.'

- Dr Beth Fulton

Test flying ocean science

The simulations are a key tool for looking at the state of marine systems now, in the past, and how they may look into the future with climate change and human use.

Dr Beth Fulton, University of Tasmania PhD graduate is a world expert in ecosystem modelling based at CSIRO Marine and Atmospheric Research. Beth supervises students in the CSIRO-UTAS PhD Program in Quantitative Marine Science (QMS).
