ACE Network Subject Information Guide

CSC2410 Computational Thinking with Python

Trimester 2, 2024

Administration and contact details

Host department	School of Mathematics, Physics and Computing
Host institution	University of Southern Queensland
Name of lecturer	Wencheng Yang
Phone number	+61 7 4631 2608
Email address	Wencheng.yang@unisq.edu.au
Homepage	https://staffprofile.usq.edu.au/profile/wencheng-yang
Name of honours coordinator	Joanna Turner
Phone number	+61 7 4631 2096
Email address	Joanna.Turner@unisq.edu.au
Name of masters coordinator	Xiaohui Tao
Phone number	+61 7 4631 1576
Email address	Xiaohui.Tao@unisq.edu.au

Subject details

Handbook entry URL	https://allendowney.github.io/ModSimPy/
Subject homepage URL	https://www.unisq.edu.au/course/specification/2023/CSC2410-S2-2023-ONC-TWMBA.html
Honours student hand-out URL	
Teaching period (start and end date):	Start date: 13 May 2024 End date: 11 August 2024
Exam period (start and end date):	Start date: 12 August 2024 End date: 18 August 2024
Contact hours per week:	4 hours
ACE enrolment closure date:	
Lecture day(s) and time(s):	Wednesday 4-6pm and Thursday 12-2pm AEST
Description of electronic access arrangements for students (for example, LMS)	USQ Connect (Moodie)

Subject content

1. Subject content description

Computational thinking is a core skill across many cross disciplinary fields. Future professionals in management roles as well as data analysts need to understand fundamental computational approaches to problem solving. The topics in this course are intended to introduce students not merely to the coding of computer programs, but algorithmic thinking, data management, the methodology of computer programming, and the principles of good program design including modularity, encapsulation and abstraction. The Python language is used because of its extensive application libraries and its effectiveness and popularity as a modern programming language.

This course covers fundamental computational problem solving concepts, tools and methodologies. Students will learn how to select an appropriate data type and apply the most appropriate technical processes for a given computational problem. They will also learn how to develop modular code which conforms to the basic principles and practices of software engineering.

2. Week-by-week topic overview

Week 1:	Introduction to modelling and simulation of physical systems. Intro to python programming. Software setup
Week 2:	Time series data and plotting of bike share system model. Python fundamentals: variables, functions, conditional statements and loops.
Week 3:	Iterative modelling and system metrics. Python fundamentals: function parameters, classes and objects.
Week 4:	Incremental development. Sweeping parameters. Python fundamentals: function return values, loops and arrays.
Week 5:	Extract data from web page with Pandas library. Model and simulate constant population growth.
Week 6:	Proportional growth model.
Week 7:	Quadratic growth and equilibrium. Python fundamentals: common problems with functions.
Week 8:	Comparing predictions.
Week 9:	Epidemiology - modelling an epidemic. Evaluate the effectiveness of possible interventions.
Week 10:	Optimisation - metrics to quantify effect of a disease and possible interventions. Determine optimal interventions within fixed budget.

Week 11:	Improving the epidemic model - sweeping two parameters to explore relationship between them, using data to estimate parameters.

3. Assumed prerequisite knowledge and capabilities

Familiarity with beginner level foundational computing concepts such as variables, looping constructs and conditional statements. Ability to solve problems in the context of programming by designing, implementing, debugging, and testing a solution to a prescribed problem, verifying that the solutions meet expected criteria.

4. Learning outcomes and objectives

On successful completion of this course students should be able to:

1.Effectively conduct program designs including modularity, encapsulation and abstraction.

2.Differentiate between available data types and demonstrate their appropriate problem application.

3. Apply available libraries to solve problems.

Learning Outcome Descriptors at AQF Level 8

Knowledge

K1: coherent and advanced knowledge of the underlying principles and concepts in one or more disciplines

K2: knowledge of research principles and methods

Skills

S1: cognitive skills to review, analyse, consolidate and synthesise knowledge to identify and provide solutions to complex problem with intellectual independence

S2: cognitive and technical skills to demonstrate a broad understanding of a body of knowledge and theoretical concepts with advanced understanding in some areas

S3: cognitive skills to exercise critical thinking and judgement in developing new understanding

S4: technical skills to design and use in a research project

S5: communication skills to present clear and coherent exposition of knowledge and ideas to a variety of audiences

Application of Knowledge and Skills

A1: with initiative and judgement in professional practice and/or scholarship

A2: to adapt knowledge and skills in diverse contexts

A3: with responsibility and accountability for own learning and practice and in collaboration with others within broad parameters

A4: to plan and execute project work and/or a piece of research and scholarship with some independence

5. Learning resources

Texts/Lecture notebooks:

The course readings and lecture notebooks are available on the USQ course StudyDesk. Lectures notebooks use the Jupyter notebook format.

Software:

The course lectures, exercises and assignments use Python and Jupyter notebooks. Students are advised to install the open-source Anaconda Distribution which provides the necessary tools and libraries for the course.

6. Assessment

Exam/assignment/classwork breakdown					
Exam	50 %	**Assignment**	50 %	**Class work**	0 %

Assignment due dates	Assignment 1 (20%) 30 June 2024	Assignment 2 (30%) 11 August 2024	Click here to enter a date.	Click here to enter a date.
Approximate exam date			Start date: 12 August 2024 End date: 18 August 2024
